Complete Service Pricing Specification

Developer & Admin Reference Document — All Rates Admin-Editable

Covers: Hourly Rental · Intercity (One-Way & Round-Trip) · Corporate Transport · Airport Transfer · Travel & Tour

Document Scope

This document consolidates the pricing calculation logic for all five currently finalized Rownaa services into a single developer reference: Hourly Rental, Intercity Travel (One-Way & Round-Trip), Corporate Transport, Airport Transfer, and Travel & Tour. It replaces the need to reference three separate files (Hourly Pricing Developer Spec, Intercity Pricing Specification, and Service Pricing Formula Specification) — all of that content is merged here without changes to the underlying logic.

Event Transport and Wedding Booking pricing are intentionally excluded — that formula is still under review and will be issued as a follow-up specification once finalized.

Note: *Every rate, threshold, and percentage in this document must be implemented as an admin-editable setting. Nothing described below should be hard-coded in the application.*

1. Hourly Rental Pricing

1.1 Vehicle Categories & Rates

All categories below always exist in the system. Each one has its own ON/OFF toggle in the Admin Panel: turned OFF, it is hidden from the customer app; turned ON, it appears in "Choose Car." New categories can be added the same way without rebuilding the screen.

The table below lists the current 7 vehicle categories with their recommended base rates. Every value must be stored as an editable field in the admin panel.

Category	Seats	4 Hour Rate	10 Hour Rate	Extra Hour Rate	Extra KM Rate
Sedan Economy	4	1600 tk	2800 tk	250 tk	12 tk
Sedan (Standard)	4	2000 tk	3500 tk	300 tk	15 tk
Sedan Premium	4	2800 tk	4800 tk	400 tk	18 tk
Noah	7	3000 tk	5200 tk	500 tk	20 tk
Chander Gari	8	3500 tk	6000 tk	550 tk	22 tk
HiAce	11	4000 tk	7000 tk	600 tk	25 tk
Luxury (Prado/Camry)	4-6	4500 tk	8000 tk	700 tk	25 tk

1.2 Pricing Logic

1.2.1 Base Package

- Each category has two selectable base packages: 4-Hour and 10-Hour.

- The 4-Hour and 10-Hour rates already include a fixed included distance (recommended default: 40 km) and driver cost.
- The included-distance value (40 km) must also be an admin-editable field, per category if needed.

1.2.2 Extra Hour Charge

- If the customer keeps the car beyond the selected package duration, each additional hour is charged at the category's Extra Hour Rate.
- Extra hours should be calculated by rounding up to the nearest full hour (e.g. 1 hour 10 minutes over = 2 extra hours). Its also also be an admin-editable field.
- If the trip distance exceeds the included distance (default 40 km) within the booked package, each additional kilometre is charged at the category's Extra KM Rate.
- Extra KM and Extra Hour charges apply independently and are both shown as separate line items to the customer and driver — never merged into a single total.

1.3 Admin Panel Requirements

- A dedicated 'Hourly Pricing' settings screen where every cell in the 1.1 table (4-Hour Rate, 10-Hour Rate, Extra Hour Rate, Extra KM Rate) can be edited independently, per category.
- Ability to add a new vehicle category (name + seat count + all four rate fields) without a code change.
- Ability to edit the included distance (default 40 km) globally or per category.
- All rate changes should take effect immediately for new bookings, without affecting bookings already confirmed.
- Keep a simple change log (who changed which rate, old value, new value, timestamp) for accountability.

2. Intercity Pricing — One-Way & Round-Trip

2.1 Booking Categories ("Choose Car" Screen)

All categories below always exist in the system. Each one has its own ON/OFF toggle in the Admin Panel: turned OFF, it is hidden from the customer app; turned ON, it appears in "Choose Car." New categories can be added the same way without rebuilding the screen.

Category	Seats	Shown to Customer
Sedan Premium	4	Admin-controlled ON/OFF
Sedan	4	Admin-controlled ON/OFF
Sedan Economy	4	Admin-controlled ON/OFF
Noah	7	Admin-controlled ON/OFF
Chander Gari	8	Admin-controlled ON/OFF
HiAce	11	Admin-controlled ON/OFF
(others, e.g. Probox, added later)	—	Same toggle pattern

2.2 Pricing Tiers & Starting Rates

The One-Way and Round-Trip formulas (2.3–2.4) both read Base Fare and Per-KM Rate from these tiers. Update once in Admin, and both trip types pick it up automatically — no separate round-trip pricing table exists.

Tier	Example Cars	Base Fare (Tk)	Per-KM (Tk)	Status
Economy	Corolla, Allion, Premio (older)	3,000	40	Active
Premium	Corolla/Civic (newer), Camry	4,500	40	Active
Luxury	Crown, Mark X, new Camry	TBD	TBD	Hidden

2.3 One-Way Trip Pricing

Steps: (1) customer picks Pickup, Drop and car category → (2) system calls the map API for road distance = Planned Distance → (3) system looks up Base Fare + Per-KM Rate for that category from Admin settings → (4) calculates Total Price → (5) customer sees only the Total → (6) once the trip runs, Actual Distance is tracked against Planned Distance for Extra-KM (Section 2.5).

Total Price = Base Fare + (Planned Distance × Per-KM Rate)

- Distance is always pulled live from a map/distance API (e.g. Google Maps Distance Matrix) — road distance, never straight-line, never typed in manually.
- Customer only ever sees the final Total Price (e.g. "৳10,680") — per-km rate and base fare are never shown or broken down. Route distance may optionally be shown for information only.

Worked example — Dhaka → Jessore, ≈192 km, Economy:

3,000 + (192 × 40) = 10,680 Tk

2.4 Round-Trip Pricing

A round trip is priced differently depending on whether the car waits overnight, since a waiting car can't take other bookings.

Type	Description
Same-Day	Car drops customer, waits a few hours nearby, returns same day. No overnight stay.
Multi-Day	Car & driver stay at the destination one or more nights before returning.

2.4.1 Same-Day Round Trip

Same-Day Price = One-Way Price + (Base Fare × Same-Day Return Charge %, default 50%)

- One-Way Price part uses the one-way distance, not doubled — the Per-KM Rate already covers the return drive.
- Same-Day Return Charge % is its own admin field (2.6); being a % of Base Fare it auto-scales by category.
- Must always be shown to the customer as its own line item, separate from the One-Way Price.
- Maximum Same-Day Round Trip Distance: admin-editable, default 250 km (one-way). Beyond this, Same-Day is not offered — only Multi-Day is available (fatigue/safety limit).

2.4.2 Multi-Day Round Trip — Waiting Charge

Multi-Day Price = One-Way Price + (Waiting Nights × Daily Waiting Charge)

- Daily Waiting Charge is its own admin-editable rate (Tk/night); can become category-specific later.
- Always shown to the customer as its own line item, separate from the trip price.
- If the customer changes the number of waiting nights before the trip starts, recalculate and show the new total before charging.

2.4.3 What the Customer Sees

Pickup Point, Drop Point, car category and trip type (Same-Day / Multi-Day) are selected at booking; Multi-Day also asks for number of nights. Breakdown shown: Trip Fare + Waiting Charge (if any) = Total. No per-km rate or base fare shown.

2.4.4 Worked Examples (Economy)

Dhaka → Jessore, ≈192 km (within the 250 km limit, both types available):

> ***Same-Day: 10,680 + (3,000 × 50%) = 12,180 Tk | 3-day/2-night: 10,680 + (2 × 2,000) = 14,680 Tk***

Dhaka → Cox's Bazar, ≈414 km (exceeds 250 km → only Multi-Day offered), 3-day/2-night:

> ***3,000 + (414 × 40) + (2 × 2,000) = 23,560 Tk***

2.5 Extra Distance (Overage KM) — Applies to Both Trip Types

- Planned Distance: One-Way = Pickup→Drop distance. Round-Trip = one-way distance × 2 (out + back).
- "Start Trip" begins GPS tracking of Actual Distance; "End Trip" / "Complete Trip" closes it and compares Actual vs. Planned.
- If Actual > Planned, the difference is Extra KM. If Actual ≤ Planned, Extra KM = 0.

> ***Extra Charge = Extra KM × Extra-KM Rate New Total = Original Total + Extra Charge***

- Extra-KM Rate (Tk/km) is its own admin field, separate from the normal Per-KM Rate.
- Extra Charge is always its own line item — never merged silently into the trip total.
- Visible to the driver (after End Trip: Extra KM, Extra Charge, new grand total) and to admin, per completed trip: Planned Distance, Actual Distance, Extra KM, Extra Charge, New Total, plus (for multi-day) Waiting Nights and Waiting Charge.
- Global ON/OFF toggle in Admin Panel. OFF: distances are still recorded for reporting, but nothing extra is charged. ON: Extra Charge is auto-calculated as above.
- Any time the driver is asked to use the car for personal use while waiting overnight, that distance is out of scope and is not billed to the customer unless agreed separately.

2.6 Admin Panel — All Editable Settings

None of the values below are hard-coded. Any change applies to new bookings immediately — no developer or redeploy needed.

Setting	Applies To	Default	Notes
Base Fare — per pricing tier	One-Way & Round-Trip	Eco 3,000 / Prem 4,500	Separate field per tier
Per-KM Rate	One-Way & Round-Trip	40 Tk (uniform)	Global now; per-tier/city later if needed
Minimum trip distance	One-Way	—	Optional
Enable/disable pricing tier (e.g. Luxury)	Booking flow	—	Toggle to show/hide
Enable/disable car category (2.1 list)	Choose Car screen	—	Per-category toggle; hidden when OFF
Extra-KM charging ON/OFF	Both	—	Global toggle
Extra-KM Rate (Tk/km)	Both	Not pre-filled	Separate from Per-KM Rate; set before enabling toggle

Setting	Applies To	Default	Notes
Same-Day Return Charge %	Round-Trip	50%	% of Base Fare
Maximum Same-Day Round Trip Distance (km, one-way)	Round-Trip	Distance chosen by admin	Beyond this, Multi-Day only Admin-controlled ON/OFF
Daily Waiting Charge (Tk/night)	Round-Trip (Multi-Day)	—	Own field; can go category-specific later
Enable/disable Multi-Day Round Trip	Round-Trip	—	Toggle
Maximum waiting nights per booking	Round-Trip	—	Optional limit

2.7 Developer Checklist

- Planned Distance always comes live from the map API (road distance) — never typed in manually.
- One-Way Total = Base Fare + (Planned Distance × Per-KM Rate).
- Before offering Round-Trip options, check one-way distance against Max Same-Day Distance (default 250 km): if it's over, only offer Multi-Day. Its work only when one-way distance against Max Same-Day Distance(ON)
- Same-Day Price = One-Way Price + (Base Fare × Same-Day Return Charge %); Multi-Day Price = Same-Day Price + (Waiting Nights × Daily Waiting Charge).
- Round-trip Planned Distance for overage tracking = one-way distance × 2; use the same Start Trip / End Trip GPS tracking and Extra-KM formula as One-Way, gated by the same ON/OFF toggle.
- Base Fare, Per-KM Rate, Extra-KM Rate, Same-Day Return Charge %, Max Same-Day Distance and Daily Waiting Charge are each their own separate, admin-editable field — never hard-coded, never shared with each other.
- Every car category on the Choose Car screen has its own Admin ON/OFF toggle, independent of pricing-tier toggles.
- Customer-facing screens show only the final Total Price plus clearly separate line items for Same-Day Return Charge / Waiting Charge / Extra Charge — the raw per-km rate or base fare is never shown.
- If the customer changes waiting nights before the trip starts, recalculate and show the new total before charging.
- Two pricing tiers (Economy, Premium) active at launch; structure so Luxury and further car categories can be switched on later without rebuilding the pricing engine.

3. Corporate Transport

Designed for repeat/ongoing business use: single trips, short multi-day bookings, weekly, and monthly contracts. Pricing uses a Fixed Daily Rate model — each duration tier has its own fixed Tk/day rate per car category, set directly by the admin. No percentage or formula-based discount is calculated at runtime.

3.1 Fixed Daily Rate Table (by Car Category)

Each cell below is individually editable in the admin panel. The system finds which duration tier a booking falls into, takes that tier's fixed rate for the selected car category, and multiplies by the number of days.

Car Category	1-6 Days (Tk/day)	7-14 Days (Tk/day)	15-29 Days (Tk/day)	30+ Days (Tk/day)
Sedan Economy	Tk 3,000	Tk 2,600	Tk 2,400	Tk 2,150
Sedan	Tk 3,800	Tk 3,300	Tk 3,050	Tk 2,750
Sedan Premium	Tk 5,000	Tk 4,350	Tk 4,000	Tk 3,600
Noah	Tk 6,500	Tk 5,650	Tk 5,200	Tk 4,700
HiAce	Tk 8,500	Tk 7,400	Tk 6,800	Tk 6,150

Note: *No formula, percentage, or auto-calculation is applied — admin enters the exact Tk/day value for each tier, per category.*

3.2 How Total Is Calculated

Total Fare = (Fixed Daily Rate for the matching tier) × (Number of Days Booked)

The system checks how many days the booking covers, finds which tier that falls into (1-6 / 7-14 / 15-29 / 30+), takes that tier's fixed rate for the selected car category, and multiplies by the number of days.

3.3 Worked Example — Sedan Economy

Duration Tier	Rate (Tk/day)	Days Booked	Total (Tk)	Savings vs Flat Rate
1-6 Days	3,000	6	18,000	-
7-14 Days	2,600	14	36,400	5,600
15-29 Days	2,400	29	69,600	17,400

- the Admin will set the maximum number of days allowed for direct booking.
  If a customer selects more than the allowed days.
- The customer will see “For bookings exceeding this limit, our team will contact you to discuss the details and confirm the booking.”
- The maximum booking duration must be editable from the Admin Panel

4. Airport Transfer

Short point-to-point trips between Hazrat Shahjalal International Airport and a pickup/drop zone. Priced as a flat zone fare, not per-km, matching standard market practice.

4.1 Formula

> ***Airport Transfer Fare = Flat Zone Fare (by zone + car category) + Waiting Charge (depends on Trip Direction, beyond free window) + Round Trip Surcharge (if applicable) + Late Night Surcharge (if applicable)***

Note: *Trip Direction (Section 4.5) determines which Waiting Charge window applies and whether the Round Trip Surcharge is added — this must be captured at booking time, not assumed from the zone or car category.*

4.2 Car Categories

Same car category set used across the platform, excluding "Chander Gari" (Intercity-only).

- Sedan Economy, Sedan, Sedan Premium, Noah, HiAce

4.3 Zone Structure — 8 Zones

Zones are defined by driving distance from the airport, not by North Dhaka / South Dhaka labels — the customer only cares how far their pickup point is.

Zone	Coverage Area
Zone 1	Uttara (Sectors 1–18), Ashkona, Diabari, Nikunji 1 & 2 (Airport Core)
Zone 2	Khilkhet, Dakshinkhan, Uttarkhan, Turag, North Tongi (Near North)
Zone 3	Gulshan 1 & 2, Banani, Baridhara (incl. DOHS), Niketan, Bashundhara R/A, Vatara, Kuril, Cantonment, Mohakhali DOHS (Gulshan–Banani–Bashundhara Corridor)
Zone 4	Badda (incl. Merul, Middle Badda), Aftabnagar, Rampura, Hatirjheel, Tejgaon, Tejgaon Industrial Area (Mid Dhaka East)
Zone 5	Mirpur (Sections 1–14, incl. DOHS), Pallabi, Rupnagar, Shah Ali, Kafrul, Ibrahimpur, Kazipara, Shewrapara (Mid Dhaka West)
Zone 6	Motijheel, Paltan, Ramna, Shahbagh, New Market, Dhanmondi, Mohammadpur, Farmgate, Shyamoli, Agargaon, Malibagh, Khilgaon, Bonoshree, Mugda (Central Business & Residential)
Zone 7	Lalbagh, Chawkbazar, Kotwali, Sutrapur, Wari, Sadarghat, Jatrabari, Shonir Akhra, Demra, Shyampur (Old Dhaka Core)
Zone 8	Keraniganj, Savar, Ashulia, Narayanganj, Dohar, Nawabganj, Konabari/Gazipur border (Extended Outskirts, outside Dhaka)

4.4 Zone × Category Rate Grid (Example)

Each zone needs its own flat rate per car category — an 8×5 grid in the admin panel. Example structure with placeholder values.

Zone	Sedan Economy	Sedan	Sedan Premium	Noah	HiAce
Zone 1	Tk 500	Tk 650	Tk 800	Tk 1,000	Tk 1,200
Zone 2	Tk 800	Tk 1,000	Tk 1,200	Tk 1,500	Tk 1,800

Zone	Sedan Economy	Sedan	Sedan Premium	Noah	HiAce
Zone 3	Tk 1,300	Tk 1,600	Tk 1,900	Tk 2,300	Tk 2,700
Zone 4	Tk 1,500	Tk 1,800	Tk 2,100	Tk 2,500	Tk 2,900
Zone 5	Tk 1,600	Tk 1,900	Tk 2,200	Tk 2,600	Tk 3,000
Zone 6	Tk 2,000	Tk 2,400	Tk 2,800	Tk 3,300	Tk 3,800
Zone 7	Tk 2,600	Tk 3,000	Tk 3,400	Tk 3,900	Tk 4,400
Zone 8	Tk 3,500	Tk 4,000	Tk 4,500	Tk 5,200	Tk 6,000

Note: *Trips beyond Zone 8 (e.g. to another district) should not use this module at all; the system should route the customer to Intercity pricing instead.*

4.5 Trip Direction

The customer must select a Trip Direction when booking an Airport Transfer. This determines which Waiting Charge window applies and whether the Round Trip Surcharge is added. It also changes what the booking form asks for and how the driver's schedule is set.

Trip Direction	What It Means	Waiting Charge	Round Trip Surcharge	Booking Form Asks For
Airport Drop-off	Customer is going abroad; picked up from home/Home Zone and dropped at the airport,	Send-off Window only (4.6.1)	Not applied	Departure time — must reach the airport by
Airport Pickup	Customer is arriving from abroad; picked up at the airport and dropped at home/Home Zone	Receive Window only (4.6.2)	Not applied	Flight number + scheduled arrival time
Round Trip (Drop-off + Pickup)	Same booking covers both legs — e.g. family drops a traveler off, then returns later to receive them, or drives to the airport and waits for both legs.	Both Send-off Window (4.6.1) and Receive Window (4.6.2), applied to their respective legs	Applied (4.7)	Both: departure time for Leg 1, flight number + arrival time for Leg 2

Note: *This selection is mandatory at booking — the system must not guess Trip Direction from zone or car category. It directly controls which Waiting Charge logic (4.6) and Round Trip Surcharge (4.7) get applied.*

4.6 Waiting Charge

Waiting Charge has two separate windows depending on Trip Direction (4.5). Only one applies per leg — never both on the same leg.

4.6.1 Send-off Window (Airport Drop-off leg)

Applies when the driver/family is at the airport waiting for the departing passenger to finish check-in/security (Airport Drop-off or the drop-off leg of a Round Trip).

- Free wait window: 30 minutes from arrival at the airport (admin-editable).
- After the free window: admin-editable hourly waiting charge (market range observed: Tk 100–200/hour).

4.6.2 Receive Window (Airport Pickup leg)

Applies when the driver is waiting at the airport for an arriving passenger to clear immigration/baggage (Airport Pickup or the pickup leg of a Round Trip).

- Free wait window: 30 minutes for domestic flights, 60 minutes for international flights, counted from actual flight landing time — not scheduled time (admin-editable).
- After the free window: admin-editable hourly waiting charge (market range observed: Tk 100–200/hour).
- Flight number should be captured at booking so the system/driver can track real landing time (flight delays should not cost the customer extra free-window minutes).

4.7 Round Trip Surcharge

- Applies whenever a single booking covers both an Airport Drop-off leg and an Airport Pickup leg (Trip Direction = Round Trip, Section 4.5) — e.g. a family drops a traveler off, then returns later to receive them, or the common send-off-and-receive pattern for a family member going abroad and coming back.
- Flat admin-editable surcharge added on top of the one-way Zone Fare (market range observed: Tk 500). This is separate from, and in addition to, the Waiting Charges in Section 4.6.
- Not applied to Airport Drop-off-only or Airport Pickup-only bookings.

4.8 Late Night Surcharge

- Admin-editable flat surcharge for duty between 1:00 AM–5:00 AM (market range observed: Tk 300).

5. Travel & Tour

Multi-day tour packages to popular destinations (Cox's Bazar, Sylhet, Sreemangal, etc.). Unlike Intercity, this is NOT calculated from distance × per-km — it is sold as a fixed all-inclusive package per route, matching standard market practice.

5.1 Formula

Tour Fare = Fixed Destination Package Rate (by route + car category + number of days) + Extra Day Charge (if extended) + Custom Route Fallback (if no fixed package exists)

5.2 Fixed Package Rate Table

Each popular route/duration combination gets its own admin-configurable flat rate per car category, e.g.:

Route	Days	Sedan	Sedan economy	Sedan premium	Noah / X-Noah	Hiace
Dhaka ↔ Cox's Bazar (Inani, Himchari, Marine Drive, Teknaf)	4	Tk 26,000	To be priced	27000	Tk 30,000	Tk 30,000
Dhaka ↔ Sreemangal (Lawachara, Madhabpur, Tea Gardens)	2	Tk 11,500	To be priced	13000	Tk 14,500	Tk 14,500
Dhaka ↔ Sreemangal ↔ Sylhet (Jaflong, Lalakhal, Ratargul, Bichanakandi)	3	To be priced	To be priced	To be priced	To be priced	To be priced

Note: *This table is a starting seed from market research and is not exhaustive — the admin panel must let the business add new Route + Days + Car Category combinations freely, each with its own flat price, rather than hard-coding a fixed list of routes in code.*

5.3 Package Inclusions

- Package rate includes: rental fare for all days, driver food & accommodation for the trip duration, fuel, CNG, tolls, and all standard road expenses on the defined route.
- If the customer wants to visit places outside the defined route, the customer bears any extra fuel cost for that detour (flag this clearly in the booking confirmation UI).

5.4 Extra Day Charge

- If the customer extends the trip beyond the booked number of days, each additional day is charged at the category's standard Daily Rate (reuse the Daily rate from the Hourly Rental Pricing section, 1.1).

5.5 Custom Route Fallback

If the customer requests a destination with no pre-defined fixed package, the system falls back to the Intercity + Round Trip formulas (Sections 2.3 / 2.4) to generate a quote instead of blocking the booking.

6. Summary for Developer

Service	Pricing Logic	Key Admin-Editable Settings
Hourly Rental	4-Hour / 10-Hour base package + Extra Hour + Extra KM beyond included distance	4hr/10hr rate, extra hour rate, extra KM rate, included distance — all per category
Intercity — One-Way	Base Fare + (Planned Distance × Per-KM Rate)	Base Fare & Per-KM Rate per tier, Extra-KM Rate + toggle
Intercity — Round-Trip	One-Way Price + Same-Day Return Charge % or + (Waiting Nights × Daily Waiting Charge)	Same-Day Return Charge %, Max Same-Day Distance, Daily Waiting Charge
Corporate	Fixed Daily Rate per duration tier (no % calc)	Tk/day rate per category × 4 duration tiers
Airport Transfer	Flat zone fare + Trip Direction (drop-off/pickup/round trip) + waiting/round-trip/late-night add-ons	8-zone × category rate grid, Trip Direction, send-off/receive wait windows, surcharges
Travel & Tour	Fixed package per route/days/category	Route package table (editable/addable), extra day rate

Note: *Not covered in this document: Event Transport and Wedding Booking pricing — still under review, to be issued as a follow-up specification.*
